Notes:

- B, Not detected substantially above the level reported in the laboratory or field blanks.
- J, Analyte present. Reported value may not be accurate or precise.
- R, Unusable result. Analyte may or may not be present in the sample.
- U, Not detected.
- UJ, Not detected. Reporting limit may not be accurate or precise

Notes:

B, Not detected substantially above the level reported in the laboratory or field blanks.

J, Analyte present. Reported value may not be accurate or precise.

R, Unusable result. Analyte may or may not be present in the sample.

U, Not detected.

UJ, Not detected. Reporting limit may not be accurate or precise

Notes:

- B, Not detected substantially above the level reported in the laboratory or field blanks.
- J, Analyte present. Reported value may not be accurate or precise.
- R, Unusable result. Analyte may or may not be present in the sample.
- U, Not detected.
- UJ, Not detected. Reporting limit may not be accurate or precise

Table B6
Pore Water Analytical Data Summary (0-0.5 feet) - 2018
Revised Salem Canal Screening-Level Ecological Risk Assessment
Chemours Chambers Works, Deepwater, New Jersey

Parameter Category	Field Sample ID	Location ID	Sample Date	Filtered	Parameter Name	Report Result	Report Units	Lab Qualifier	Validation Qualifier
VOC	SC-256-PORE-SR8	SC-256	11/8/2018	N	1,3-Dichlorobenzene	4	UG/L	U	
VOC	SC-256-PORE-SR8	SC-256	11/8/2018	N	1,2-Dichlorobenzene	4	UG/L	U	

Notes:

B, Not detected substantially above the level reported in the laboratory or field blanks.

J, Analyte present. Reported value may not be accurate or precise.

R, Unusable result. Analyte may or may not be present in the sample.

U, Not detected.

UU, Not detected. Reporting limit may not be accurate or precise

Notes:

- B, Not detected substantially above the level reported in the laboratory or field blanks.
- J, Analyte present. Reported value may not be accurate or precise.
- R, Unusable result. Analyte may or may not be present in the sample.
- U, Not detected.
- UJ, Not detected. Reporting limit may not be accurate or precise

Notes:

- B, Not detected substantially above the level reported in the laboratory or field blanks.
- J, Analyte present. Reported value may not be accurate or precise.
- R, Unusable result. Analyte may or may not be present in the sample.
- U, Not detected.
- UJ, Not detected. Reporting limit may not be accurate or precise

**RE: SALEM CANAL SEDIMENT SAMPLING 5/09, DUPONT,
CHAMBERS WORKS**

Enclosed is the final data report for the samples collected for the Salem Canal Sediment Sampling 5/09 at DuPont, Chambers Works. Samples were collected on May 5, 6 and 8, 2009 for the analytical method references summarized in the table below:

Analysis	Method Reference
Volatile Organics, PPL+	SW 846 8260B
Semivolatile Organics, PPL+	SW 846 8270C
Metals, PPL+	SW 846 6010B/6020/7470A/7471A
Ammonia	EPA 350.2 MOD/SM 4500-NH3 C MOD
Chloride	EPA 300
Moisture	EPA 160.3 MOD/SM2540 G
Nitrate/Nitrite	EPA 300
Phosphorus	EPA 365.1
Sulfate/Sulfide	EPA 300/SW 846 9034
TOC	SM 5310B MOD/C

Sample Receipt

Samples analyzed for sulfide were received at Test America – North Canton on May 11, 2009. All samples were received in satisfactory condition and within the EPA temperature guidelines. Blank water was not provided by the lab, therefore equipment blanks were not submitted for sulfide.

The remaining samples were received at Lancaster Laboratories, Lancaster, PA, on May 6-8, 2009. All samples were received in satisfactory condition and within the EPA temperature guidelines.

Data Review

The electronic data submitted for this sampling event was reviewed via the automated DuPont Data Review (DDR) process. No major QC exceptions were noted during the review.

Several minor QC exceptions were also noted during the review. The MS and/or MSD RPRs for various compounds were above the upper control limit. The reported results of the affected compounds in the associated samples may be biased high. The MS and/or MSD RPRs for various compounds were below the lower control limit. The reported results of the affected compounds in the associated samples may be biased low and the reporting limits may be higher than reported.

There was a high RPD between MS and MSD samples for several compounds. The reported results of the affected compounds in the associated samples may be biased high.

At least one volatile surrogate had an RPR outside of control limits. The reported results and the non-detects of the affected compounds in the associated samples may be inaccurate.

Analysis hold times for percent solids, acrolein and acrylonitrile were exceeded. The reported results and reporting limits of the non-detects of the associated samples may be biased low.

There was methylene chloride contamination in a method blank. The sample results not significantly different from the associated blank hit were qualified with a "B" flag.

Positive results between the method detection limit (MDL) and quantitation limit, not otherwise qualified, were qualified J and should be considered to be estimated values.

Please refer to the DDR Narrative Report for specific data qualification.

The laboratory data reports are included in this report as an attachment. Please do not hesitate to contact me if you have any questions regarding this report.

DuPont In-House Review (DDR)

The DDR is an automated internal review process used by the ADQM group to determine if the data is usable. The data is run through this automated program where a series of checks are performed on the data. The data is evaluated against hold time criteria, checked for blank contamination, assessed against matrix spike(MS)/matrix spike duplicate (MSD) recoveries, assessed against relative percent differences (RPDs) between these samples, assessed against laboratory control sample(LCS)/control sample duplicate (LCSD) recoveries, assessed against RPDs between these samples, assessed against RPDs between laboratory replicates, and assessed against surrogate spike recoveries. The DDR applies the following data qualifiers to analysis results, as warranted:

Qualifier	Definition
B	Not detected substantially above the level reported in the laboratory or field blanks.
R	Unusable result. Analyte may or may not be present in the sample.
J	Analyte present. Reported value may not be accurate or precise.
UJ	Not detected. Reporting limit may not be accurate or precise.

Memorandum

DATE: SEPTEMBER 7, 2011

TO: Gary Long, Kathy West

FROM: Candia A. Carle

RE: SALEM CANAL RA ECO CONFIRMATION, DUPONT,
CHAMBERS WORKS

Enclosed is the revised data report for the samples collected for the Salem Canal RA ECO Confirmation event at DuPont, Chambers Works. This revised memo includes additional sample notes and QC outliers not included in the original memo. Samples were collected on August 1 - 4, 2011 for the analytical method references summarized in the table below:

Analysis	Method Reference
Volatile Organics, PPL+	SW 846 8260B
Semivolatile Organics, PPL+	SW 846 8270C
Moisture	SM 2540 G
Grain Size	D422
TOC	SW 846 9060A/9060A MOD

Sample Receipt

Samples were received at Lancaster Laboratories, Lancaster, PA, on August 1 - 4, 2011. All samples were received in satisfactory condition. Several coolers received on 8/2/2011 and 8/3/2011 had slightly elevated temperatures.

Grain size at sample point CWK-E-SCD94(0.0-0.5) was cancelled by the lab due to insufficient volume.

Data Review

The electronic data submitted for this sampling event was reviewed via the automated DuPont Data Review (DDR) process.

Several major QC exceptions were noted. The MS and/or MSD RPRs for various organic compounds were below the data rejection level. The reported non-detects of the associated

compounds in samples CWK-E-SCD95(0.0-0.5), CWK-E-SCD107(0.0-0.5) and CWK-G-SCD94 were qualified with an “R” flag.

Several minor QC exceptions were also noted during the review. The MS and/or MSD RPRs for a semivolatile compound were above the upper control limit. The reported result of the associated sample may be biased high. The MS and/or MSD RPRs for a semivolatile compound were below the lower control limit. The reported result in the associated sample may be biased low and the reported non-detects may be higher than reported.

The LCS and/or LCSD RPR for a semivolatile compound were above the upper control limit. The result in the associated sample may be biased high. The LCS and/or LCSD RPR for a volatile compound were below the lower control limit. The reported non-detects in the associated samples may be higher than reported.

There was a high RPD between MS and MSD samples for a semivolatile compound. The reported result in the associated sample may be imprecise.

Analysis hold times for acrolein and acrylonitrile were exceeded. The reporting limits of the non-detects of the associated samples may be biased low.

Duplicate and parent sample RPRs for moisture and carbon disulfide were greater than 50% in sample CWK-E-SCD107(0.5-1.0). The results were qualified with a “J” flag.

The Tentatively Identified Compounds (TICs) reported should be considered estimated values.

Positive results between the method detection limit (MDL) and quantitation limit, not otherwise qualified, were qualified J and should be considered to be estimated values.

Please refer to the DDR Narrative Report for specific data qualification.

The laboratory data reports are included in this report as an attachment. Please do not hesitate to contact me if you have any questions regarding this report.

DuPont In-House Review (DDR)

The DDR is an automated internal review process used by the ADQM group to determine if the data is usable. The data is run through this automated program where a series of checks are performed on the data. The data is evaluated against hold time criteria, checked for blank contamination, assessed against matrix spike(MS)/matrix spike duplicate (MSD) recoveries, assessed against relative percent differences (RPDs) between these samples, assessed against laboratory control sample(LCS)/control sample duplicate (LCSD) recoveries, assessed against RPDs between these samples, assessed against RPDs between laboratory replicates, and assessed against surrogate spike recoveries. The DDR applies the following data qualifiers to analysis results, as warranted:

Qualifier	Definition
B	Not detected substantially above the level reported in the laboratory or field blanks.
R	Unusable result. Analyte may or may not be present in the sample.
J	Analyte present. Reported value may not be accurate or precise.
UJ	Not detected. Reporting limit may not be accurate or precise.

Reporting Limit: MDL

DDR Standards LABSTATS

Associated MS and/or MSD analysis had relative percent recovery (RPR) values less than the data rejection level. The reported non-detect result is unusable.

Sample ID	Date Sampled	Lab ID	Analyte	Result	Units	MDL	PQL	Qual	Analytical Methods	
									Analysis	Preprep- Prep-
CWK-E-SCD107(0.0-0.5)	8/3/2011	6364190-1 FS	HEXACHLOROCYCLOPENTADIENE	< 570	UG/Ki	570	1700	R	8270C	3546
CWK-E-SCD107(0.0-0.5)	8/3/2011	6364190-1 FS	BENZIDINE	< 4000	UG/Ki	4000	11000	R	8270C	3546
CWK-E-SCD95(0.0-0.5)	8/2/2011	6362823-1 FS	HEXACHLOROCYCLOPENTADIENE	< 590	UG/Ki	590	1800	R	8270C	3546
CWK-E-SCD95(0.0-0.5)	8/2/2011	6362823-1 FS	4,6-DINITRO-2-METHYLPHENOL	< 590	UG/Ki	590	1800	R	8270C	3546
CWK-E-SCD95(0.0-0.5)	8/2/2011	6362823-1 FS	2,4-DINITROPHENOL	< 1200	UG/Ki	1200	3500	R	8270C	3546
CWK-W-SCD94	8/1/2011	6361214-1 FS	2-CHLOROETHYL VINYL ETHER	< 2	UG/L	2	10	R	8260B	5030B

Associated LCS and/or LCSD analysis had relative percent recovery (RPR) values higher than the upper control limit. The reported result may be biased high.

Sample ID	Date Sampled	Lab ID	Analyte	Result	Units	MDL	PQL	Qual	Analytical Methods	
									Analysis	Preprep- Prep-
CWK-E-SCD119(0.0-0.5)	8/4/2011	6365820-1 FS	N-NITROSODIPHENYLAMINE	1500	UG/Ki	780	1600	J	8270C	3546

Associated MS and/or MSD analysis had relative percent recovery (RPR) values higher than the upper control limit. The reported result may be biased high.

Sample ID	Date Sampled	Lab ID	Analyte	Result	Units	MDL	PQL	Qual	Analytical Methods	
									Analysis	Preprep- Prep-
CWK-E-SCD95(0.0-0.5)	8/2/2011	6362823-1 FS	1,4-DICHLOROBENZENE	4800	UG/Ki	59	120	J	8270C	3546

High relative percent difference (RPD) observed between MS and MSD samples. The reported result may be imprecise.

Sample ID	Date Sampled	Lab ID	Analyte	Result	Units	MDL	PQL	Qual	Analytical Methods	
									Analysis	Preprep- Prep-
CWK-E-SCD95(0.0-0.5)	8/2/2011	6362823-1 FS	1,2-DICHLOROBENZENE	7100	UG/Ki	59	120	J	8270C	3546

The reported result is greater than/equal to the MDL and less than the PQL; it should be considered an estimated value.

DDR Narrative Report**

Site: CWK - CHAMBERS WORKS

9/27/2011 13:30:41

Project: SALEM CANAL RA ECO CONFIRM

Page 3 of 30

Reporting Limit: MDL

DDR Standards LABSTATS

The reported result is greater than/equal to the MDL and less than the PQL; it should be considered an estimated value.

Sample ID	Date Sampled	Lab ID	Analyte	Result	Units	MDL	PQL	Qual	Analytical Methods
